

Packaging Optimisation Training

Description of the Service

Repak launched its Packaging Optimisation Training Programme in 2008. The programme is delivered off-site by the FÁS Environmental Training Unit over 6 days, broken into modules of 2 days each. Participants gain an awareness of packaging waste prevention techniques and are able to identify and implement packaging optimisation initiatives in their own organisations on their return. The course is self-financing and candidates are certified upon completion of the programme.

Benefits of the Service

On completion of the training, participants are equipped to:

- Prevent packaging waste
- Optimise packaging systems
- Identify cost saving opportunities
- Implement change
- Seek external help

Possible Issues

The programme can only be completed by attending the three two-day modules and submitting a packaging project on their own organisations.

Further Information

Contact the membership services department at Repak or the FÁS Environmental Training Unit for more information.
